Scott N. Schober is the President and CEO of Berkeley Varitronics Systems (BVS), a 40 year old, family-owned New Jersey-based company and leading provider of advanced wireless solutions and products for multi-national telecommunications and security markets. Since the beginning of Scott's BVS tenure in 1989, the company’s product line of wireless test instruments has increased to over 50 products with a core focus on Wi-Fi, cellular, WiMAX, LTE and advanced radio devices for both security and optimization of wireless networks.

Technology & Security Expert

Scott’s recent focus has been development (patent pending) of BVS’ cell phone detection tools, used to enforce a ‘no cell phone policy’ in various venues. These tools are effectively used around the globe to find contraband cell phones smuggled into correctional facilities, secure federal buildings and schools. Since we are surrounded by smartphones all day, these products continue to find new uses in hot button applications such as distracted driving and identity theft.

Mr. Schober is a highly sought after security expert for media appearances and commentary. He has presented as a subject expert on the topic of cyber security/corporate espionage, as well as cell phone detection participating in numerous conferences and trade shows around the globe.

“Our roots as a design and engineering firm informs our approach to products, “ says Scott. “Engineering solutions directly for customers since 1973 has given us valuable insight into making the products that customers will want.”
