BVS to Demonstrate Bloodhound Cell Phone Detector at N.A.A.W.S. in Niagara Falls

BVS to exhibit latest cell phone detection products at the North American Association of Wardens & Superintendents expo in Niagara Falls.

METUCHEN, NJ, April 20, 2010 -- Berkeley Varitronics Systems, Inc. (BVS), a leading provider of advanced wireless solutions and products to the domestic and international wireless telecommunications industry will be showcasing the latest Bloodhound Cell Detector at the North American Association of Wardens & Superintendents Expo in Niagara Falls, NY from April 25th-27th.

BVS Northeastern Regional Sales Manager, Carmine Caferra, will be on hand to demonstrate the Bloodhound Cell Detector. This handheld unit has recently made a name for itself among many prison and correctional facilities worldwide. With its ability to detect and locate hidden contraband cell phones in either standby mode or being actively used for voice, text or other data transmissions, Bloodhound has already passed a first round of real world trials in working prisons. Security professionals of all kinds are eager to enforce their no-wireless policies without costly, specially trained K-9 units or illegal cellular jamming devices.

As a wireless, handheld device, the Bloodhound is a safe, legal (Bloodhound does not use jamming which is a violation of FCC rules), quick and cost-effective way to monitor and pinpoint unauthorized cell phones within correctional facilities 24 hours a day. The complete Bloodhound unit costs $1,800, which is much less than other solutions that may require an entire network infrastructure to be installed. The device can also be utilized by any government agency or organization that wants to enforce a ‘no wireless policy’. This can also include schools, hospitals, airliners, etc.

BVS will be showcasing the Bloodhound Cell Phone Detector at the North American Association of Wardens & Superintendents Expo from April 25-27th in Niagara Falls, NY.
