FOR IMMEDIATE RELEASE

BVS To Feature New Public Safety Testing Bundle at IWCE 2008

METUCHEN, New Jersey. -- February 27th - 29th, 2008 -- Berkeley Varitronics Systems, Inc, announced that it will feature new Public Safety Bundle including the Gator Transmitter, Coyote receiver system and Forecaster site survey mapping software.

Janet Jaracz (BVS’ Southwestern Regional Sales Manager) will be on hand to showcase the latest Public Safety bundle featuring the Gator stimulus transmitter (up to 45 watts) with Class A amplification, Coyote dual-modular receiver, and Forecaster drive-study, site survey mapping software. All of these testing solutions cover a variety of popular public safety bands.

Visit Janet at BVS booth # 211 or visit www.bvsystems.com for more information.

Over the past 12 years, BVS has shipped thousands of Gator™ Class A transmitters around the world making it one of the most recognizable stimulus transmitters available. Gator™ customers typically point out the product’s light weight, ruggedness and reliability as its strengths.

For over 7 years, Coyote(TM) dual-channel receivers have been used in the field by numerous engineers and installers. All key components of the Coyote(TM) are hot-swappable in the field. Customers recognize this combination of modularity and performance as the greatest benefit to using Coyote(TM). Coyote(TM) receivers are available to match the frequency bands of the Gator(TM) transmitter.

Forecaster was introduced back in 2006 and allows Coyote users to plot and view coverage of wireless networks in table or graphical windows with the ability to create HTML reports of base stations/antennae coverage and RF overlap areas. KML overlap reports may also be generated allowing coverage to be viewed using popular programs such as Google Earth(TM). Forecaster combines realtime Coyote measurements, GPS geo-coding accuracy and PC analysis.
