FOR IMMEDIATE RELEASE

BVS Opens South American Sales Office

METUCHEN, New Jersey. -- February 11, 2008 -- Berkeley Varitronics Systems, Inc, a global leader in propagation test equipment, has hired Corinne Jaracz to head up the BVS South American sales office.

Corinne L. Jaracz has joined the BVS sales team as the Latin/South American Sales Manager handling the tremendous expansion of BVS wireless products throughout South American territories. Her 15+ years of experience in telecommunications sales and business includes previous positions as International Sales Manager for Tatung Telecom and Region Manager for Vector Health Systems. Corinne’s fluency in Spanish makes her an ideal candidate for managing BVS’ strategic international partnerships within Latin/South America, and handling the growing volume of customer sales and support required for the region.

“We are pleased to announce the addition of Corinne to our growing domestic and international BVS sales force.” said Scott Schober, CEO and President of BVS.

BVS continues to make inroads into Central and South America with the introduction of its popular Gator™ and Coyote™ 3.5 GHz WiMAX combination for drive-studies and propagation analysis as well as over 18 unique software and hardware Wi-Fi analysis solutions.

Over the past 12 years, BVS has built and delivered thousands of Gator(TM) Class A transmitters around the world making it one of the most recognizable stimulus transmitters available. Gator(TM) customers typically point out the product’s light weight, ruggedness and reliability as its strengths.

For over 7 years, Coyote™ dual-channel receivers have been used in the field by numerous engineers and installers. All key components of the Coyote™ are hot-swappable in the field. Customers recognize this combination of modularity and performance as the greatest benefit to using a Coyote™. Coyote™ receivers are available to match the frequency bands of the Gator™ transmitter.

Forecaster™ software allows Coyote users to plot and view coverage of wireless networks in table or graphical windows with the ability to create HTML reports of base stations/antennae coverage and RF overlap areas. KML overlap reports may also be generated allowing coverage to be viewed using popular programs such as Google Earth™. Forecaster combines realtime Coyote measurements, GPS geo-coding accuracy and PC analysis.
