

# REMOTE MANAGER™

software for your **YELLOWFIN**

software **FIXED OR MOBILE** WIMAX REMOTE MONITORING SOFTWARE

See EVERYTHING your YellowFin sees...

RSSI

CINR

Multipath

Waveform Traces

Spectrum Analysis

Peak Hold/Search

Segment (Mobile)

Cell ID (Mobile)

Base ID (Fixed)

...from ANYWHERE

## FEATURES

- Controls YellowFin remotely from any RJ-45 connection
- Monitor your network from anywhere - home and office.
- Data collected in real-time and stored in a relational database\*
- Create comprehensive reports from your measured network data
- Export reports to PDF® and MS Excel® formats
- Collect spectrum data from the WiMAX RF environment
- **Fixed** WiMAX packet data parameters such as Base ID, CINR, multipath & RSSI
- **Mobile** WiMAX packet data parameters such as Cell ID, Segment, CINR, multipath & RSSI
- Data reports over various time periods for temporal overview of your network

**YellowFin® WiMAX Remote Manager™** software is a data monitoring & reporting application that connects to any **YellowFin® Fixed WiMAX** analyzer through a standard 10/100 ethernet connection. With **Remote Manager™**, users can control what wireless data is to be collected via the **YellowFin® WiMAX** analyzer and store that data in a relational database\* for future retrieval and analysis. **Remote Manager™** allows users to scan the RF spectrum and preamble over time creating a network footprint of usage to find out who's in your network airspace with or without authorization. **Remote Manager™** even creates comprehensive PDF or MS Excel reports for an IT manager's overview. All of this can be accomplished from anywhere in the world; all you need is access to an ethernet connection to place your YellowFin receiver.
