

We know our customers.

Security professionals rely upon sophisticated, rugged and calibrated wireless threat detection tools to catch the bad guys and keep their clients safe. Yorkie-Pro™ is an advanced handheld wireless threat detection system.

- Cellular, Wi-Fi, BT/BLE
- Whitelisting friendly devices
- Direction Finding of P.E.D.s
- Personal tracker detection

People are being tracked.

Everyone smartphone user has opted into a tracking and data collection system whether they know it or not. However, many other people (and their possessions) are being tracked without their consent or knowledge.

New low-power BLE (Bluetooth Low Energy) trackers are being used for both legal and illegal means. These essentially disposable, tiny trackers contain batteries lasting all year and deliver the precision and convenience of conventional GPS trackers which have been in use by professionals (both thieves and law enforcement) for years.

With the power of global tracking of nearly anything now in the hands of consumers, the temptation for abuse is too high to ignore. Reports of stalking, theft and trafficking of illegal packages are on the rise...

but we have a solution.

Learn about our wireless threat solution designed for TSCM professionals, law enforcement, private investigators and government and military security details.

More about us...

- Over 50 years in business
- Private, family-owned wireless tech company
- All products designed & manufactured in USA

STALKING THEFT TRAFFICKING

using BLE personal trackers

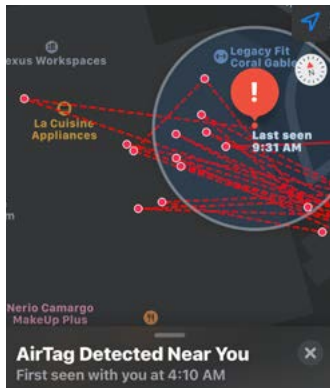

ON THE RISE

STALKING

There was a 300% increase in stalking reports to police between 2020 and 2021. Physical stalking used to involve shady investigators, require GPS tracker subscriptions and cost potentially thousands of dollars, but that all changed with personal trackers such as AirTag®.

I Was Stalked with an Apple AirTag

Now anyone with a smartphone can purchase an inexpensive tracker, place it in someone's pocket or purse and track them remotely for hours or even days without their knowledge. Android users must run an app in the background all the time in order to detect unknown AirTags on their person.

Apple AirTag stalking is still a real danger

Beware of modded 'silent' AirTags that make it harder to hear warning chimes and stop stalkers

Apple AirTags - 'A perfect tool for stalking'

THEFT

Car thieves are hiding AirTags inside new cars and tracking them straight from the dealer's lot back to their home where they then steal them using cloned keys and other illegal techniques.

Family finds AirTag tracking device in new car, vehicle stolen days later

Headlines highlight the broader problem of safety and security when thieves know where people store their vehicles and also where they live.

POLICE SAY CAR THIEVES USING APPLE AIRTAGS TO TARGET VEHICLES

OFFICER WARNS HOW THIEVES ARE USING APPLE AIRTAGS TO STEAL CARS

TRAFFICKING

Personal trackers are tiny and have a long battery life making them ideal for tracking packages around the world. These same trackers also operate on encrypted networks run by tech companies like Apple and Samsung keeping law enforcement out of the loop. This allows criminals to ship and track illegal drugs, guns and more surreptitiously making tracking and arrests difficult for law enforcement.

Mail drug smuggling a growing problem

Agents tasked with locating illegally trafficked packages face a daunting task. Rather than opening up every seized package, inspectors can pinpoint only packages containing BLE trackers that thieves are increasingly using.
